Somnoware Diagnostics 1.2412.0

Product description

Somnoware Diagnostics is a cloud-based software that streamlines diagnostic testing workflows in the sleep and respiratory care industry. It orchestrates data flow between medical devices and unifies datasets within a single platform.

What's new

- From **Study Manager**, you can now download multiple sleep studies to your system and use the Device Interface (SDI) to assign, score and categorize the studies.
- From the **Preferences > Report Builder > Impressions** section, physicians can use a new **Refresh** option in the **More** menu (...) to view and configure impression statements for OSA - Alternate AHI in interpretation reports. Previously, physicians had to use the **Reset to default** option to view the **OSA - Alternate AHI** section, which cleared their current configurations.
- If you use Nox T3™ home sleep test devices with a **Recording type** selected, the **Set default values** window and **Checkout device** window no longer display settings preconfigured in the Nox T3 primary sleep software, Noxturnal™.
- You can now upload sleep study files with long file paths of 250 characters or more.
- In the **Reports** module, removed section title icons.
- Bug fixes and enhancements.

System requirements

Supported browsers

- Google Chrome™
- Microsoft® Edge™
- Firefox®
